The human apolipoprotein(a) kringle domains IV36 (LK6 protein), IV37 (LK7 protein) and V38 (LK8 protein) together form the angiogenesis inhibitor, LK68 protein. LK68, LK6, LK7 and LK8 are inhibitors are of endothelial cell proliferation, cell migration and normal development of capillaries in the chick embryo choricallantoic membrane (CAM). LK68 protein, its single kringles or their functional equivalents, are useful for treating angiogenesis-mediated diseases, such as cancer, rheumatoid arthritis, psoriasis or ocular angiogenic disease in animals or humans. LK68 is useful as an anticancer agent and the state of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel angiogenesis inhibitor, LX68 for treating angiogenesis-mediated diseases, e.g. cancer and rheumatoid arthritis, has human apolipoprotein(a) kringle domains IV36, IV37 and V38 amino acid

LK68, LK6, LK7 and LK8 are inhibitors are of endothelial cell proliferation, cell migration and normal development of capillaries in the chick embryo chorioallantoic membrane (CAM). LK68 protein, its single kringles or their functional equivalents, are useful for treating angiogenesis-mediated diseases, such as cancer, rheumatoid arthritis, psoriasis or ocular angiogenic disease in animals or humans. LK68 useful as an anticancer agent and also for inhibiting primary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel angiogenesis inhibitor, LK68 for treating angiogenesis-mediated diseases, e.g. cancer and rheumatoid arthritis, has human apolipoprotein(a) kringle domains IV36, IV37 and V38 amino acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method of preparing plasminogen kringle 5 CC peptide fragments. The method comprises mixing mammalian plasminogen and cellstase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and CC endothelial cell proliferation and migration. The peptides are useful contreating angiogenic diseases, primary and metastatic solid tumours can carcinomas of various organs such as breast, genital tract, and carcinomas of various organs such as breast, genital tract, carcinomas from haematopoietic malignancies such as leukaemias and collid tumours carising from haematopoietic malignancies such as leukaemias and collid tumours carising from haematopoietic malignancies such as leukaemias and collid tumours carising from haematopoietic malignancies such as leukaemias and collid tumours carising from haematopoietic malignancies such as leukaemias and collid tumours carising from haematopoietic malignancies uch as leukaemias and collid tumours carising from haematopoietic malignancies with a such as leukaemias and collid tumours carising from haematopoietic malignancies (e.g., haemangiomas, Osler-Webber CC (e.g., psoriasis), blood vessel disease (e.g. haemangiomas, Osler-Webber CC (e.g., psoriasis), blood vessel disease (e.g., cat scratch cc endothelial cells (e.g., Crohn's disease, atherosclerosis), diseases could vice angiogenesis as a pathologic consequence (e.g., cat scratch cc disease and ulcers). The peptides are also useful as a birth control collidary consequence (e.g., cat scratch control asymptotic are also useful as a birth control collidary consequence (e.g., cat scratch control asymptotic consequences (e.g., cat scratch control consequences (e.g., cat scratch control consequences (e.g., cat scratch control contr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc peptide fragments. The method comprises mixing mammalian plasminogen and celastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and conditions of the peptides are useful conditionally considered in the ration and migration. The peptides are useful conditionated of various organs such as breast, genital tract, cand carcinomas of various organs such as breast, genital tract, cand carcinomas of various organs such as breast, genital tract, carling from haematopoietic malignancies such as leukaemias and conditionated conditiona
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of preparing plasminogen kringle 5 CC peptide fragments. The method comprises mixing mammalian plasminogen and CC elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of anglogenesis and cendothelial cell proliferation and migration. The peptides are useful CC for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, CC endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from haematopoietic malignancies such as leukaemias and CC lymphomas. They are also used for the prophylaxis of various autoimmune diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber CC syndrome), diseases caused by excessive or abnormal stimulation of CC which have angiogenesis as a pathologic consequence (e.g., cat scratch disease and ulcers). The peptides are also useful as a birth control control which inhibits ovulation and establishment of the plasenta.

CC Sequences AAB01906-B01919 represent fragments of human plasminogen used in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                     δ

                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method of preparing plasminogen kringle 5 cc peptide fragments. The method comprises mixing mammalian plasminogen and cc elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of anglogenesis and cc emothelial cell proliferation and migrary and metastatic solid tumours cf or treating angiogenic diseases, primary and metastatic solid tumours cand carcinomas of various organs such as breast, genital tract, cand carcinomas of various organs such as breast, genital tract, composition matematopoletic malignancies such as leukaemias and cc arising from haematopoletic malignancies such as leukaemias and cc diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber (e.g., psoriasis), blood vessel diseases (e.g. haemangiomas, Osler-Webber (composition), diseases and ulcers). The peptides are also useful as a birth control cc which have anglogenesis as a pathologic consequence (e.g., cat scratch codes and ulcers). The peptides are also useful as a birth control cc sequences habilite ovulation and establishment of the placenta. Cc sequences habilite ovulation of the invention.
                                                                                                                                                                                                                                                                                                                                                                                          Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  is derived from the plasminogen protien, and comprises amino acids 99-467. Greenstatin is also derived from plasminogen, and comprises amino acids 101-354. Angiostatin and greenstatin are used as thrombolytic factors and angiogenesis inhibitory proteins. Angiostatin contains the kringle 1-4 region of plasminogen, and greenstatin contains the kringle 1-4 region of plasminogen, and greenstatin contains the kringle 1-5 region of plasminogen, and greenstatin contains the kringle 1-6 region of plasminogen, and greenstatin a high sumber of disulphide bonds, they are difficult to purify. The specification describes a method for the purification of such angiogenesis inhibitory proteins. The method comprises solubilising the proteins, produced as inclusion boddes in Escherichia coli and glutathione. The angiogenesis inhibitory proteins specifically inhibit proliferation of vascular endothelial cells, but not that of non-endothelial cancers or normal cells. The angiogenesis inhibitory
Angiogenesis inhibitor; plasminogen; human; K4 protease; snake venom; cobra; antimetastatic; cytostatic; antitumour prostate cancer; breast cancer; colon cancer; lung cancer;

                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a preferred angiogenesis inhibitor of the invention that is obtained by cleavage of human plasminogen with spitting cobra (Naja nigricollis nigricollis) venom K4 protease and plasmin. The K4 protease cleaves native plasminogen following amino acid residue 452, with little or no disruption of the first 4 plasminogen kringles. Plasmin cleaves between residues 77 and 78 of human plasminogen. Thus, the present protein spans amino acid residues 78-451 of plasminogen. The angiogenesis inhibitors obtained from plasminogen can be used to inhibit tumour growth in a mammal preferably human. They are useful for treating angiogenesis associated diseases such as: solid tumours, prostate cancer, breast cancer, colon cancer and lung cancer (claimed);
                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                            blood-borne tumors such as leukaemia; metastasis; benign tumours; rheumatoid arthritis; psoriasis; ocular angiogenic diseases; myocardial angiogenesis; plaque neovascularization; telangiectasia; haemophiliac joints; angiofibroma; wound granulation; excessive or abnormal stimulation of endothelial cells; and as birth control agents by perventing vascularization required for embryo implantation. The inhibitors are administered also to extend the dormancy of micrometastases and to stabilize any residual primary

                                                                                                                                             밁
                                                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                                                        The present sequence represents a preferred angiogenesis inhibitor of the invention that is obtained by cleavage of human plasminogen with spitting cobra (Naja nigricollis nigricollis) venom K4 protease and plasmin. The K4 protease cleaves native plasminogen following amino acid residue 452, with little or no disruption of the first 4 plasminogen kringles. Plasmin cleaves between residues 77 and 78 of human plasminogen. Thus, the present protein spans amino acid residues 77-451 of plasminogen. The angiogenesis inhibitors obtained from plasminogen can be used to inhibit tumour growth in a mammal, preferably human. They are useful for treating angiogenesis-associated diseases such as solid tumours, prostate cancer, breast cancer, colon cancer and lung cancer (claimed); blood-borne tumors such as leukaemia; metastasis; benign tumours; rheumatoid arthritis; psoriasis; ocular angiogenic diseases; myocardial angiogenesis; plaque neovascularization; telangiectasia; haemophiliac joints; angiofibroma; wound gramulation; excessive or implantation. The inhibitors are administered also to extend the cormancy of micrometastases and to stabilize any residual primary

                                                                                                                                                                                                                                                                                                                                                                                                                   inhibiting endothelial cell proliferation, using as active component inhibiting endothelial cell proliferation, using as active component analysistatin fragment, a combination of angiostatin fragments, or aggregate angiostatin. The fragment is preferably derived from murine, thuman, Rhesus, porcine or bovine plasminogen and is a kringle 1-2, kringle 1-4 kringle 2-3, kringle 1-3, kringle 1-2, kringle 1-4 kringle 2-3, kringle 1-3, kringle 1-2, kringle 1-4 kringle 1-2 kringle 1-4 kringle 1-4 kringle 1-2 kringle 1-4 kringle 1-4 kringle 1-4 kringle 1-4 kringle 1-2 kringle 1-2 kringle 1-2 kringle 1-2 kringle 1-4 kringle 1-2 kringle a will kringle 1-4 kringle 1-2 kringle a kringle for treating and bovine plasminogen. The active component can be used for treating angiogenesis-mediated diseases such as cancer, arthritis, macular degeneration and diabetic retinopathy. It can also be used to develop antibodies for use in diagnosis, detection and therapy.

The present sequence, human kringle 1-4 kKLS, is a specific angiostatin fragment which can be used in the invention.

                                                                                                                                      ર્
                                                                                                                                                                           밁
                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                           RESULT 12
                                                                                                                                                                                                                                                                                                                                                                     This invention relates to angiogenesis-inhibiting protein receptors, and the DNA sequences encoding them. Angiogenesis is the generation of new clood vessels into a tissue, and normally occurs in wound healing, cc foetal and embryonal development and the formation of the corpus luteum, endometrium and placenta. Angiostatin is a protein (see AAB16450 and cc AAA68202) involved in angiogenesis, and has an amino acid sequence cc similar to that of a plasminogen fragment (see murine plasminogen (cc AAB16490). Angiostatin has the ability to inhibit angiogenesis. Cc Endostatin is also an angiogenesis inhibiting protein (see AAB16451 and Cc AAA68203). Sequences AAA68242 and AAB16522 represent coding and protein cs sequences of human laminin. Laminin is an angiostatin binding protein cc and some of the peptides of the invention share homology with regions of ca angiogenesis-inhibiting protein receptor fragments of the invention. The peptides habl6452-B16521 (excluding AAB16490) are the cc angiogenesis-inhibiting protein receptor fragments of the invention. The such as solid tumours, psoriasis, scleroderma, mycaradial angiogenesis, crobesis, diabetic retinopathy, arthritis, wound healing, peptic ulcers, Cc rubeosis, diabetic retinopathy, arthritis, wound healing, peptic ulcers, Cc fever. They are useful for the detection and prognosis of cancer. DNA sequences A628204-A628241 encode the peptides of the invention.
                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to methods of regulating angiogenesis in individual by administering an angiogenesis regulating composition comprising a tropomyosin binding compound or an actin disrupting compound. The compositions are useful for treating diseases and process mediated by angiogenesis including haemangioma, solid tumours, blood bourne tumours, leukaemia, metastasis, Crohn's disease, coronary or cerebration, wound healing, Helicobacter related diseases, ovulation, menstruation, and cat scratch fever. The present sequence is a protein described in the exemplification of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    interferon-inducible protein and platelet factor 4, and have anti-anglogenic and/or anti-tumor activity. The multifunctional protein may exhibit useful properties such as having similar or greater biological activity when compared to a single factor or by having improved half-life or decreased adverse side effects, or a combination of these properties. The proteins can be used for treating an angiogenic-mediated disease, e.g. cancer, diabetic retinopathy, macular degeneration, or arthritis. They can also be used for inhibiting the production of tumor cells (characteristic of lung, breast, ovarian, prostate, pancreatic, gastric, colon, renal, bladder cancers; melanoma, hepstoma, sercoma and lymphoma) in a patient and for inhibiting tumor the production of the production of the production and the production of the production of the patient and for inhibiting tumor cancers and lymphoma) in a patient and for inhibiting tumor the production of the productio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         interferon-inducible protein; platelet factor 4; anti-angiogenic;

                                                                                                                                                                                                            The invention relates to a neovascularisation inhibitor which comprises amino acids 355-791 of human plasminogen. Also claimed are a method for the preparation of angiostatin, and angiostatin prepared by this method. The human plasminogen protein fragment is prepared by: (a) applying human plasminogen to a lysine Sepharose column to separate it into plasminogen form 1 and form 2; (b) separating plasminogen form 1 and form 2 and digesting them with elastase; (c) fractionating the elastase-decomposed product of form 1 plasminogen and form 2 plasminogen in a lysine sepharose column; (d) collecting the factions bound to the lysine sepharose column; (e) further fractionating the form 2 plasminogen using an Aminohexal Sepharose column; and (f) collecting the fraction bound to the Aminohexal Sepharose column. This human plasminogen fragment can be used to inhibit growth of vascular endothelial cells. The present sequence represents amino acids 355-791 of human plasminogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human plasminogen derived polypeptide - has neovascularisation inhibiting activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disulfide-bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disulfide-bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disulfide-bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disulfide-bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disulfide-bond

RESULT 15
AAY79224
   The present sequence represents an angiogenesis inhibitor obtained by cleavage of human plasminogen with make venom K4 protease from spitting cobra (Naja nigricollis nigricollis). The K4 protease cleaves the plasminogen following amino acid residue 452, producing an angiogenesis inhibitor with little or no disruption of the first 4 plasminogen kringles. Further, preferred angiogenesis inhibitors of the invention are obtained by plasmin cleavage of this K4 protease-cleaved plasminogen fragment (see ANY79225 and ANY79226). angiogenesis inhibitors are used for inhibiting tumour growth in a mammal, preferrably human. They are useful for treating
mammal, preferably human. They are useful for treating angiogenesis-associated diseases such as: solid tumours, prostate cancer, breast cancer, colon cancer and lung cancer (claimed); blood-borne tumors such as leukaemia; metastasis; benign tumours; rheumatoid arthritis; psoriasis; ocular angiogenic diseases; myocardial angiogenesis; plaque neovascularization; telangiectasia; haemophiliac joints; anglofibroma; wound granulation; excessive or abnormal stimulation of endothelial cells; and as birth control
                                                                                                                                                                                                                                                                                                    Claim 14; Fig 8; 72pp; English.
                                                                                                                                                                                                                                                                                                                                New angiogenesis inhibitors useful for treating solid tumors, leukemias, tumor metastasis, benign tumor, rheumatoid arthritis, psoriasis and ocular angiogenic diseases
                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2000-246485/21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          20-AUG-1998;
